

ETL Pipeline Development Report

Prepared by: Palak Singh
Internship: YuvaIntern - Senior Data Engineer

Introduction

ETL means Extract, Transform and Load. It prepares raw data for analytics.

Dataset

Titanic dataset from Kaggle.

Extract

Load CSV into Python using Pandas.

Transform

Clean missing values, remove duplicates, encode categories.

Load

Save cleaned data to SQLite/MySQL or CSV.

Code

Use pandas functions such as `read_csv`, `fillna`, `drop_duplicates` and `to_csv`.

Challenges

Missing values and inconsistent records were cleaned.

Conclusion

The ETL pipeline creates analysis-ready data.
